

EXPECT MORE

At the end of the day, you need a reach truck that helps you get the job done quickly and safely. The Crown family of reach trucks gives you more for your investment by increasing pallet moves with high performing lift and travel speeds, and delivering smart traction and ergonomics that give operators an edge.

Discover how the RR 5700 can increase your operator, truck and operation-wide productivity.

Safety

Entry Bar Safety Switch helps keep feet inside the compartment by disabling travel when depressed. In addition, the Dual Pedal Floorboard requires both feet properly positioned for travel.

Traction Control

OnTrac® Anti-Slip Traction Control reduces tire spin—even on wet, slick floors—improving control and extending tire life.

Comfort

The S Class gives operators a choice to sit, lean or stand, positioning the operator for optimum comfort and performance. Armrest, control handle and seat easily adjust to fit the needs of different operators.

Rack Height Select

One touch Rack Height Select allows the operator to simply press a button between rack levels to stop the forks automatically at the desired pallet opening.

Quick Change Load Wheels

Removable load wheel assemblies allows load wheels to be replaced in as little as two and half minutes, reducing maintenance labor expense and improving truck uptime.

Expect more from your reach trucks.
